

Bicycle and Pedestrian Collision Data

Manhattan Beach

Purpose of Study

This study is an information tool which South Bay cities can utilize to improve street safety. The study reports collision data so it can easily be viewed and accessed in one document. We hope this information and data will bring awareness and insights that can inform decision-making. Ultimately, this study looks to make our community safer for pedestrians and bicyclists.

Overview

This study analyzes collisions in Manhattan Beach relative to ten other South Bay cities (Carson, El Segundo, Gardena, Hawthorne, Hermosa Beach, Inglewood, Lawndale, Palos Verdes Estates, Redondo Beach, and Torrance). Data for Lomita, Rancho Palos Verdes, Rolling Hills, and Rolling Hills Estates is not available in records noted below - further research is in work for these cities.

The study focuses on the following data sets: 1. Pedestrian victims due to vehicle collision. 2. Bicyclist victims due to vehicle collision. This data is summarized year-over-year, geographically, by intersection, and with respect to other South Bay cities.

Methodology

Records of collisions involving pedestrians and bicyclists were taken from the California Statewide Integrated Traffic Records System (SWITRS), accessed via the Transportation Injury Mapping System (TIMS)¹. A query was entered into TIMS to identify collisions involving pedestrians from January 1 2018, through December 31 2022, in Manhattan Beach. The same search was made for bicycle victims involved in collisions. TIMS also provides the heatmaps and intersection rankings used in this report. The top ranked intersections by number of bicycle or pedestrian collisions were aggregated using a 150 ft search distance. Unless otherwise noted, collision counts refer to the raw count from 2018-2022.

Population-adjusted metrics are also provided using the historical E-4 population estimates from the California Department of Finance².

Collisions are coded in severity in the following order based on SWITRS:

1. Fatal
2. Severe (injury)
3. Visible (injury)
4. Complaint (of pain)

Bicycle Collision Data

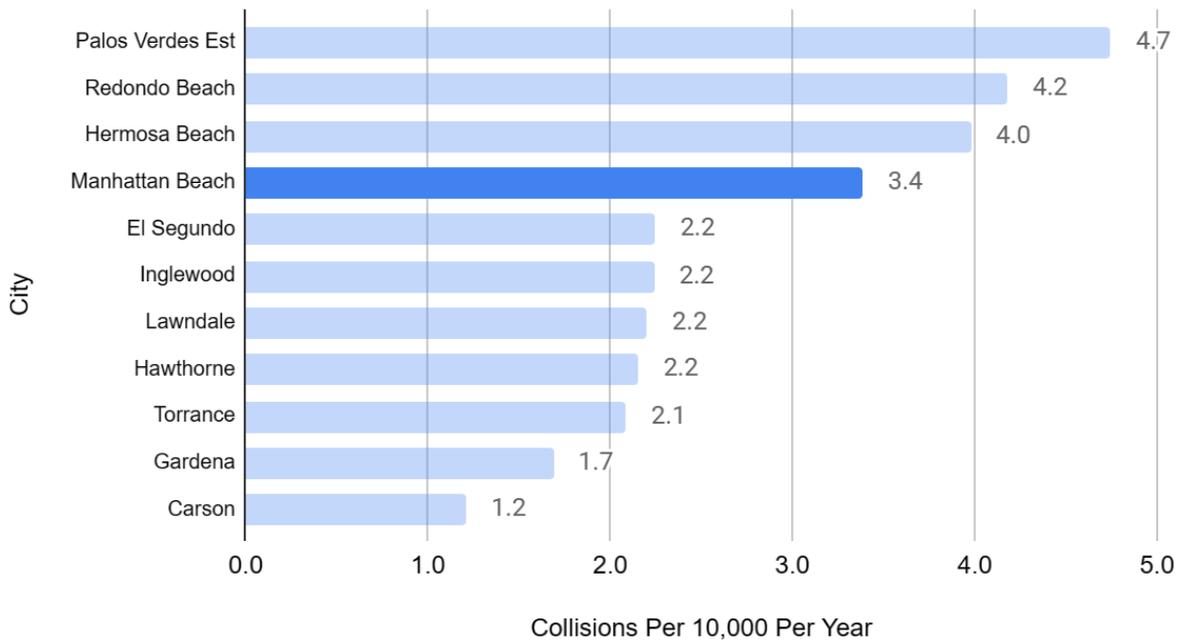

The chart below shows the total number of bicycle collisions between 2018-2022.

Total Bicycle Collisions, 2018-2022

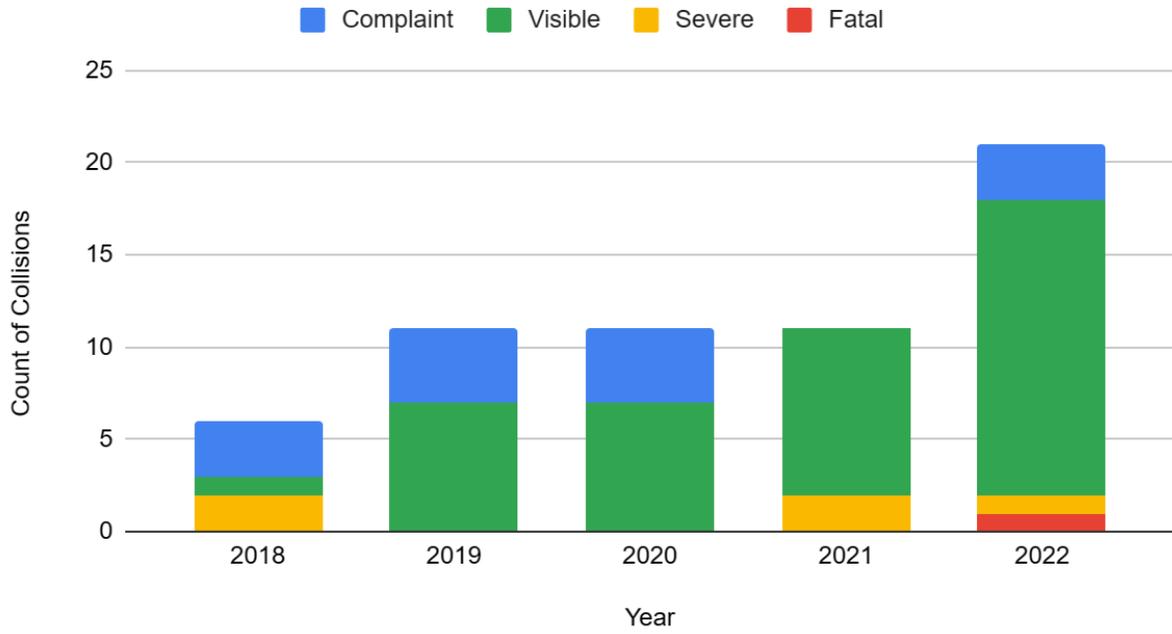

The chart below shows the average bicycle collision rate between 2018-2022, adjusted for population.

Bicycle Collision Rate, 2018-2022

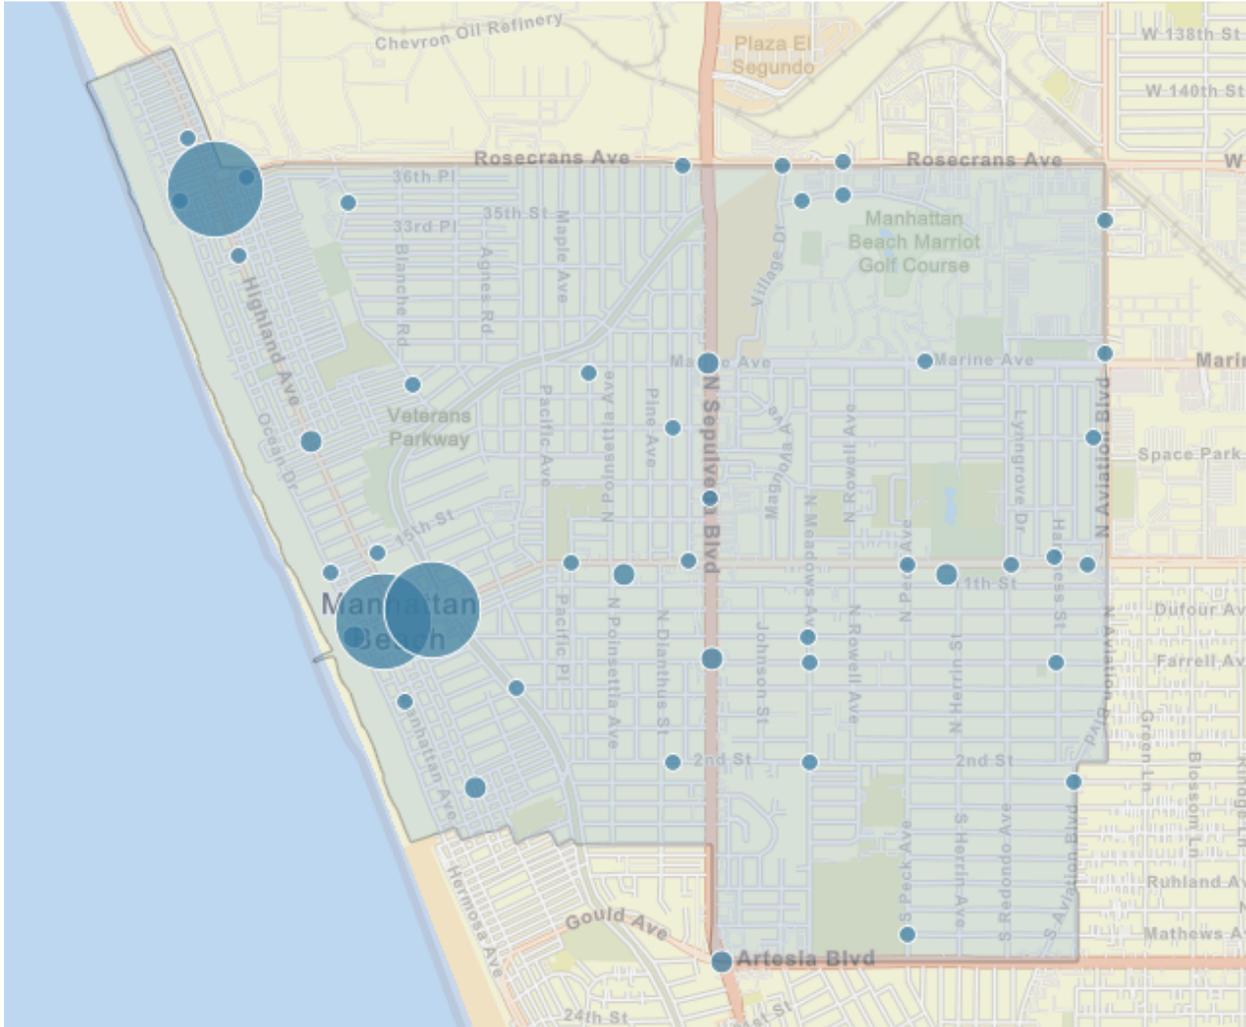

To understand this trend on a year-to-year basis, the absolute number of bicycle collisions in Manhattan Beach for each year is plotted below.

Bicycle Collision History: Manhattan Beach

The heatmap below shows where bicycle collisions between are most common in Manhattan Beach from 2018-2022. For context, the largest circle represents 3 collisions in this period.

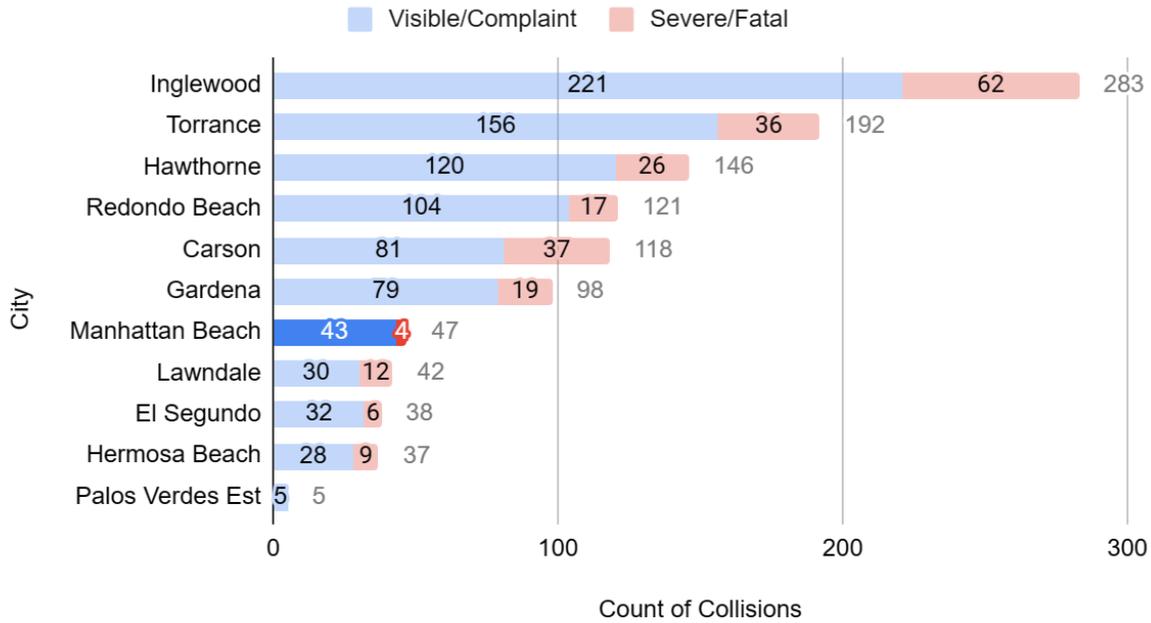

The table below shows the top ranked intersections in Manhattan Beach for bicycle collisions.

Rank	Intersection	# of Collisions
1	CREST DR & ROSECRANS AVE	3
1	HIGHLAND AVE & ROSECRANS PL	3
1	HIGHLAND AVE & ROSECRANS AVE	3
2	21ST PL & HIGHLAND AVE	2
2	36TH PL & HIGHLAND AVE	2
2	HIGHLAND AVE & MARINE PL	2
2	HIGHLAND AVE & MARINE AVE	2
2	MANHATTAN BEACH BLVD & OCEAN DR	2
2	MANHATTAN BEACH BLVD & VALLEY DR	2
3	11TH PL & MORNINGSIDE DR	1

Pedestrian Collision Data

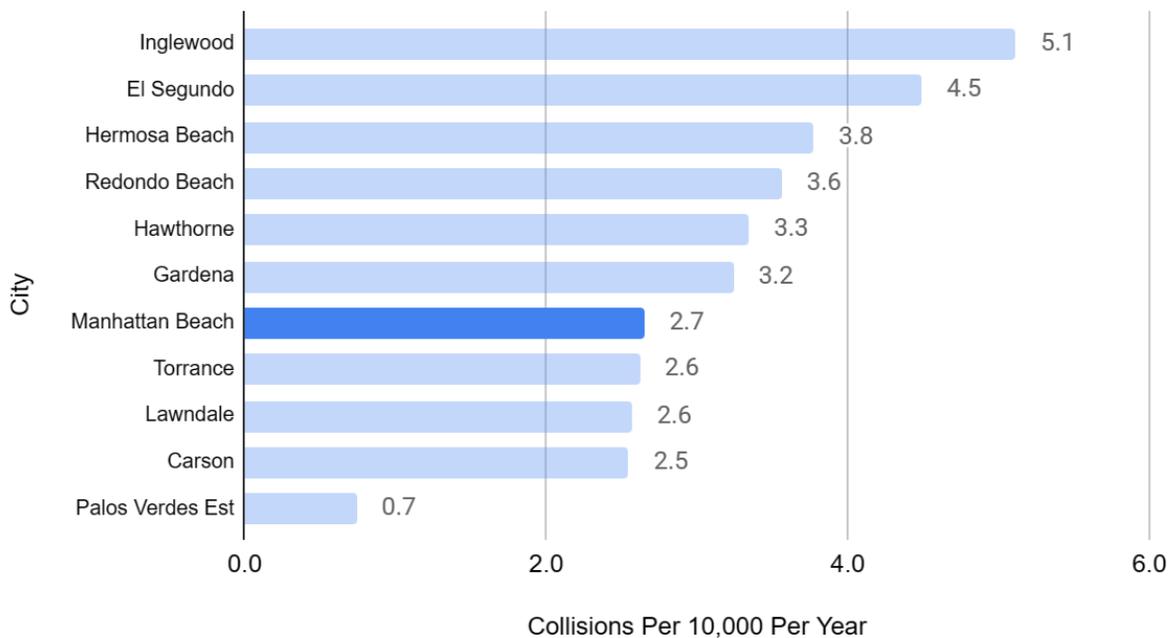

The chart below shows the total number of pedestrian collisions between 2018-2022.

Total Pedestrian Collisions, 2018-2022

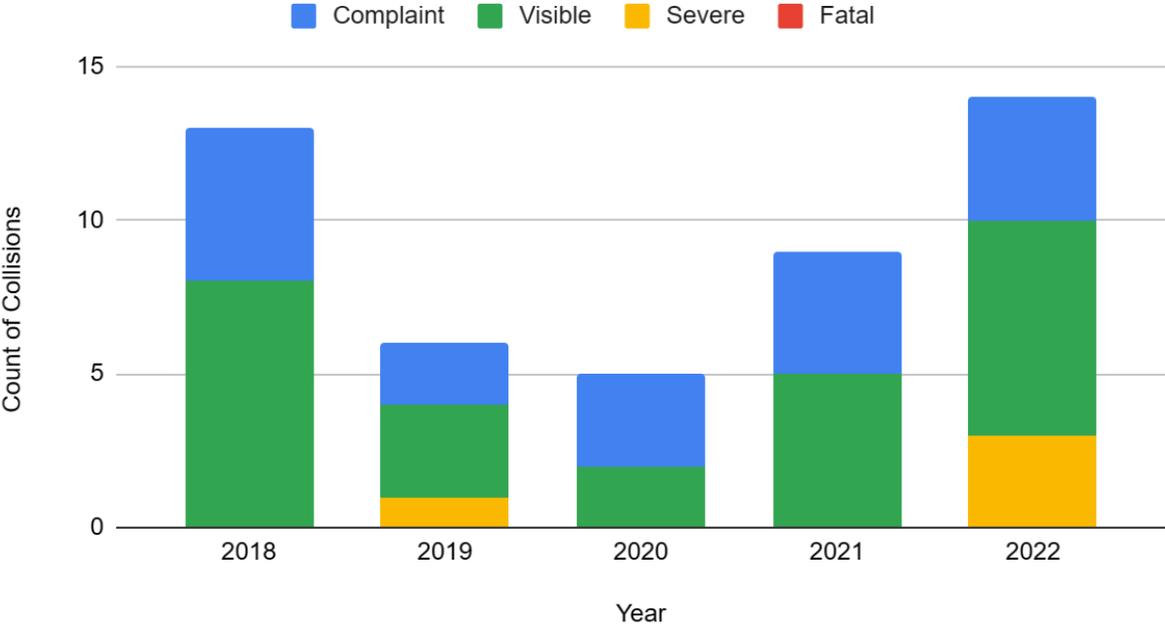

The chart below shows the average pedestrian collision rate from 2018-2022, adjusted for population.

Pedestrian Collision Rate, 2018-2022

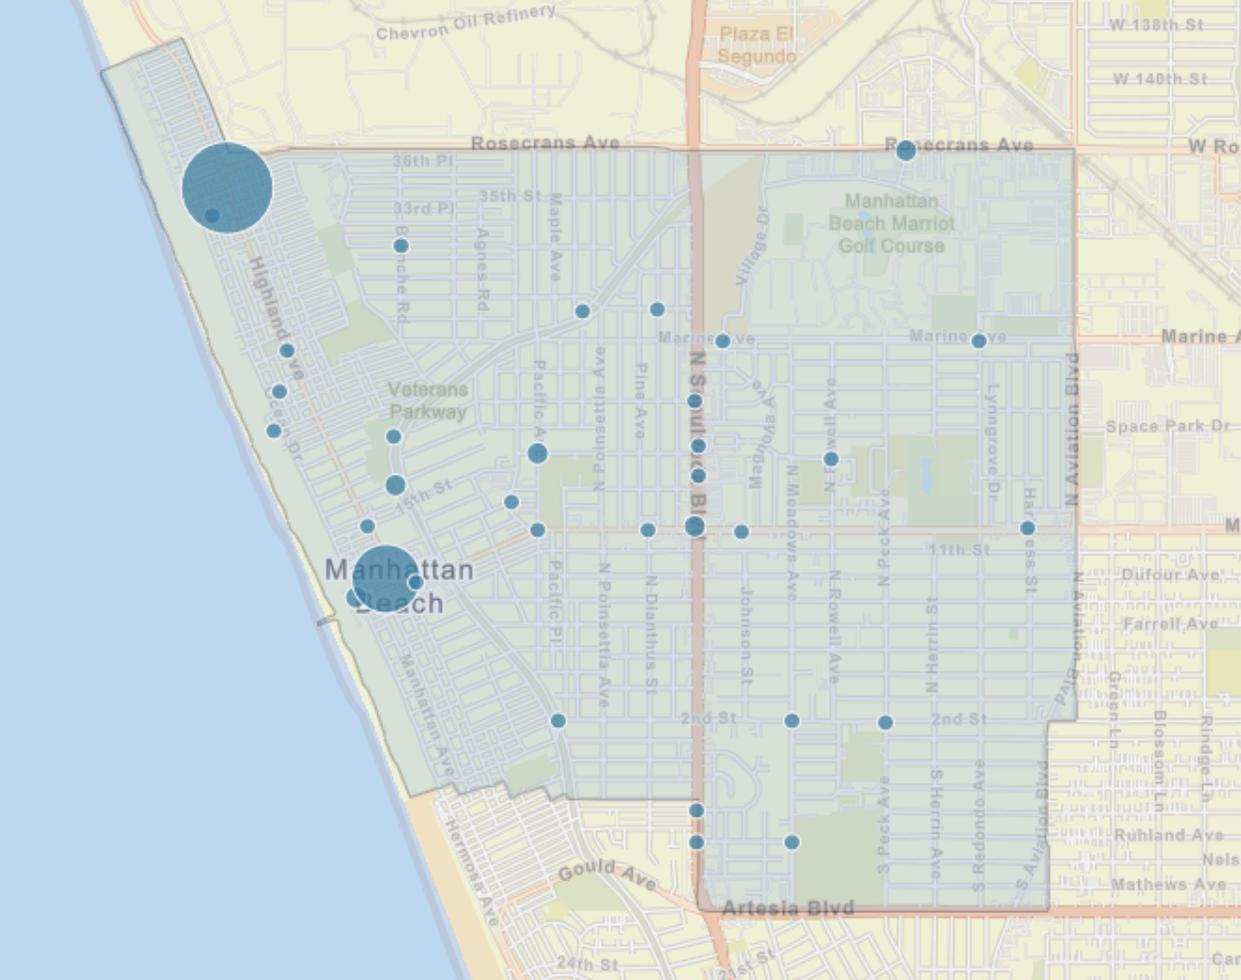

To understand this trend on a year-to-year basis, the absolute number of pedestrian collisions in Manhattan Beach for each year is plotted below.

Pedestrian Collision History: Manhattan Beach

The heatmap below shows where pedestrian collisions between are most common in Manhattan Beach from 2018-2022. For context, the largest circle represents 5 collisions in this period.

The table below shows the top ranked intersections in Manhattan Beach for pedestrian collisions.

Rank	Intersection	# of Collisions
1	36TH PL & HIGHLAND AVE	4
2	12TH PL & HIGHLAND AVE	3
2	CENTER PL & HIGHLAND AVE	3
3	35TH PL & HIGHLAND AVE	2
3	36TH ST & HIGHLAND AVE	2
3	APOLLO ST & ROSECRANS AVE	2
3	CREST DR & ROSECRANS AVE	2
3	HIGHLAND AVE & ROSECRANS AVE	2
3	MANHATTAN BEACH BLVD & SEPULVEDA BLVD & SR 1	2
4	12TH PL & OCEAN DR	1

Conclusions

Summary: Manhattan Beach	Bicycle		Pedestrian	
<i>Metric</i>	<i>Value</i>	<i>Rank</i>	<i>Value</i>	<i>Rank</i>
Total Collisions from 2018-2022	60	5	47	7
Average Collisions per Year	12		9.4	
Collision Rate (per 10,000 pop.)	3.4	4	2.7	7

Manhattan Beach ranks 4th across the studied South Bay cities for bicycle collision rate, and 7th for pedestrian collision rate. Manhattan Beach Blvd and Highland Ave have some of the highest collision rates in Manhattan Beach.

A few caveats should be understood with the summary of this data. The SWITRS data is compiled from police reports, meaning that close calls or unsafe acts that don't result in police assistance and investigation are not represented in this data. Additionally, some regions may have reduced bicycle or pedestrian traffic and therefore collisions based on an individual's risk tolerance as it pertains to the safety of the as-built environment. Thus it is important to not only reactively focus on hot-spots but also to proactively build a complete and connected network of safe bicycle and pedestrian infrastructure (South Bay Bicycle Master Plan). Lastly, the collision data was population-adjusted to allow for a more clear comparison between cities, as a proxy for the relative amount of people walking or biking. It is understood that this is not a perfect metric for normalizing based on total time or distance spent walking or biking, but provides normalization for the general size of cities.

South Bay Bicycle Coalition Plus Walking welcomes any questions, feedback, or additional sources of data to consider as part of this summary.
